## 1.0 INTRODUCTION

The primary purpose of this examination is to confirm that the Election Systems and Software (ES&S) EVS 5.0.0.0 voting system meets the requirements of Article XI-A of the Pennsylvania Election Code, sections 1101-A to 1122-A, 25 P.S. §§ 3031.1 – 3031.22. This examination is being performed per the direction of the Secretary of the Commonwealth, acting through the Pennsylvania Department of State, Bureau of Commissions, Elections and Legislation. This examination will commence on August 26, 2013 at the following location:

Keystone Building  
Training Room B  
400 North Street  
Harrisburg, Pennsylvania

The daily duration of this re-examination will be from 9:00 A.M. until 5:00 P.M. Eastern Standard Time unless a representative of the Secretary of the Commonwealth requests an extension, suspension, or a halt in testing.

“VSS” – Federal Election Commission 2002 Voting System Standards

“VVSG” – Election Assistance Commission 2005 Voluntary Voting System Guidelines

### **1.3 Background**

ES&S initiated the certification evaluation by a letter to the Pennsylvania Department of State on June 18, 2013. In this letter, ES&S requested certification of the EVS 5.0.0.0 as a new voting system to be certified for use in the Commonwealth of Pennsylvania. On May 16, 2013 the Election Assistance Commission (EAC) issued their Grant of Certification of the EVS 5.0.0.0, signifying successful completion of conformance testing to the 2005 *EAC Voluntary Voting System Guidelines (VVSG)*.

The EVS 5.0.0.0 voting system includes the following components:

- **ElectionWare**

ElectionWare is the Election Management System (EMS) software for defining contents, candidates and ballot formats and performing results post-processing.

- **DS200 Precinct Ballot Tabulator**

The DS200 is the precinct ballot tabulator component of the EVS 5.0.0.0 voting system.

- **ES&S AutoMARK**

The ES&S AutoMARK is a ballot marking system that supports audio, touchscreen and tactile keypad inputs for ballot marking.

- **DS850 Central Ballot Scanner**

The DS850 is the central ballot scanner component of the EVS 5.0.0.0 voting system.

- **Election Reporting Manager**

Election Reporting Manager (ERM) is the software used for results consolidation and report generation.

This Test Protocol was developed to ascertain whether the components comply with the requirements set forth in the Pennsylvania Election Code.

### **2.0 TEST ITEMS**

*This section contains detailed descriptions of the items tested during the re-examination, including all software, hardware, and peripherals, both proprietary and COTS, and any test support equipment or materials necessary for test performance.*

## 2.1 Software

*This subsection contains a listing of the software and firmware being evaluated.*

**Table 2.1 Software**

<b>Component Name</b>	<b>Version</b>	<b>Unique Identifier (digital signature or hash value)</b>
Election Management System (EMS)		
ElectionWare	4.1.0.0	TBD
Election Reporting Manager (ERM)	8.6.0.0	TBD
Removable Media Service	1.4.0.0	TBD
Event Log Service	1.5.0.0	TBD

## 2.4 Test Support Equipment/Materials

*This subsection contains detailed descriptions of the test support equipment and materials needed to perform the required testing.*

The Examiner will provide a tape measure (to be used in Test Case 1), Test Execution Logs, and a digital camera for test documentation.

The voting system manufacturer must provide the EMS to be certified loaded with the closed primary and general election definitions (Appendix A). These election definitions are the ballot configurations that will be used throughout the examination. The manufacturer must provide a DS200 precinct tabulation device, a DS850 central ballot scanner, an AutoMARK VAT, and an EMS to be examined. The manufacturer must be prepared to load the firmware/software for each device. The Department will also require manufacturer to configure the precinct tabulation devices as they would be in the precinct on Election Day, including seals and locks. The manufacturer must be prepared to print pre-election reports, precinct results reports, audit logs, and post-election reports. The manufacturer is responsible for providing the Department and the Examiner with technical staff to support the examination.

## 3.0 TEST MATERIALS

*This section contains a detailed description of all materials made available to Examiner for the re-examination.*

### 3.1 Technical Data Package

*This subsection lists all manufacturer provided documentation that is relevant to the system being tested.*

### 3.2 Third Party Test Reports

*This subsection lists the reports provided by third party entities that are relevant to the system being evaluated and the test engagement.*

### 3.3 Previous Test Results

*This subsection describes the results of any previous testing performed by the Department that are relevant to the examination and the system being evaluated.*

This EVS 5.0.0.0 is a new voting system; therefore, there are no previous test results relevant to the examination or the system being evaluated.

## 4.0 TEST SPECIFICATIONS

*This section contains a detailed description of the procedures to be followed during test setup and preparation.*

The examination of the voting system will occur in an environmentally controlled room. The room will be configured such that the Department, the Examiner, and the voting system manufacturer have their own independent work areas. The public will be allowed to observe the examination, but may not comment or interact with either the employees of the Department, the Examiner, or the voting system manufacturer, at any time. The manufacturer will be allotted time and space to stage the voting system prior to the examination. This time and space will be determined between the Department and the manufacturer in advance of the examination date. Once the manufacturer informs the Department that the voting system is properly set up, the Examiner will provide the manufacturer with the firmware/software for each device, submitted to the Department from the trusted source. The manufacturer will load the firmware/software on to the required media for installation onto each device and install the firmware/software onto each device before commencement of the re-examination. Once each device is loaded with the firmware/software, the manufacturer will not be allowed access to the internal components of the devices without the consent of the Department or the Examiner. If the examination is suspended, each device will be secured in a manner to ensure control of the test environment. If, at any point, the Department or the Examiner determines that the control of the test environment has been compromised, all firmware/software will be reloaded on each device.

## 5.0 TEST PROCEDURES

*This section contains a detailed description of the test sequence, test procedures and expected results.*

The test cases for this examination are contained in Appendix B of this Test Protocol. They can be executed independently and in any order.

All steps of the tests cases contain an expected result to provide objective pass/fail criteria. There are no dependencies for execution of the test cases. The test cases have been divided into three main areas for execution: (1) Targeted Functionality; (2) System Integration; and (3) Penetration Analysis. All areas of testing will be performed on-site during the examination. The test sequence for this examination will be as follows:

### **Targeted Functionality Test Cases:**

- Test Case Identifier: 01 – 1107-A(1), 25 P.S. § 3031.7(1) Voter Secrecy (Regular Voter)
- Test Case Identifier: 01 – 1107-A(1), 25 P.S. § 3031.7(1) Voter Secrecy (ADA Voter)
- Test Case Identifier: 02 – 1107-A(2), 25 P.S. § 3031.7(2) Selection of Candidates and Questions by Voter (Regular/ADA)
- Test Case Identifier: 03 – 1107-A(3), 25 P.S. § 3031.7(3) Straight Party and Pennsylvania Method
- Test Case Identifier: 04 – 1107-A(4), 25 P.S. § 3031.7(4) Straight Party and Write-In
- Test Case Identifier: 05 – 1107-A(5), 25 P.S. § 3031.7(5) Selection of Candidate and Write-in

- Test Case Identifier: 07 – 1107-A(7), 25 P.S. § 3031.7(7) Attempt to Over Vote Contests and Questions (Regular/ADA)
- Test Case Identifier: 10 – 1107-A(10), 25 P.S. § 3031.7(10) Ballot Review and Change (Regular/ADA)
- Test Case Identifier: 16 – 1107-A(16), 25 P.S. § 3031.7(16) Public Counter, No Reopening of Polls, Media Security with Tamper Proof Locks and Zero Proof and Tally Reports

#### **System Integration Test Cases:**

- Test Case Identifier: 04, 06, 08, 09, Permanent Physical Record, and Statistical Sample – 1107-A(4), 25 P.S. § 3031.7(4) Enables Voting for Legal Combinations; 1107-A(6), 25 P.S. § 3031.7(6) Permits Voting for as Many Candidates as Entitled, Permits Voting For or Against Questions, Precludes Voting for Unauthorized Candidates or Questions; 1107-A(8), 25 P.S. § 3031.7(8) Precludes Multiple Voting and Tabulating Multiple Votes; 1107-A(9), 25 P.S. § 3031.7(9) Permits Voter at Primary to Vote Only for Candidates in Party of Registration, Any Candidate for Nonpartisan Nomination, and For Any Entitled Question; 1101-A, 25 P.S. § 3031.1 Provides for Permanent Physical Record of Each Vote Cast; and 1117-A, 25 P.S. § 3031.17 Statistical Sample

#### **Penetration Analysis Test Cases:**

- Test Case Identifier: 12 – 1107-A(12), 25 P.S. § 3031.7(12) Acceptable Ballot Security Procedures and Impoundment of Ballots

## **6.0 TEST DATA**

*This section contains a detailed description of the test election definitions and ballot logic being exercised.*

The election definitions being used for this examination are provided in Appendix A of this Test Protocol. A predefined set of election parameters are included in the election definitions. Both the general election and the closed primary election definitions provide the voting variations, geographic subdivisions, parties, supported languages and test voting pattern with results being tested. The only languages required for this re-examination are English and Spanish. The Department provided the Spanish translation. Each test voting pattern provides the input method and device. For all Write-In selections, the name will be input as “John Doe.” For multiple Write-In selections, the name will be appended with the character “I” for the number of Write-In selections (*i.e.*, “John Doe I,” “John Doe II,” “John Doe III,” and “John Doe IIII” in a “Vote for Four” contest with four write-ins).

### **6.1 Data Recording**

*This subsection contains a detailed description of the procedures to be followed during test execution and data collection.*

All test data produced during this examination is the property of the Department. The output test data will be collected and stored in an appropriate manner as to allow for data analysis. Actual results from executed tests will be recorded in real-time in Test Execution Logs.

## **6.2 Data Evaluation**

The Examiner will evaluate all test results against the expected results set forth in the test cases provided in Appendix B. The acceptable range for system performance and the expected results is derived from the test designers experience and expertise. If an expected result is not achieved, an evaluation will be performed as to “why” the test or test step did not produce the expected results. This evaluation will consider test error, invalid expectations, and system performance. Failure to achieve the expected results does not constitute a test failure. A test failure only occurs when the “Criteria for Evaluation of Test Results,” as set forth in the test cases, are not achieved for a specific test.

**ATTACHMENT A**  
**ELECTION DEFINITIONS**

**Election Definition: Pennsylvania Certification Closed Primary Election**

**Primary Election Description:**

A closed primary election for 2 parties in 3 precincts. This election contains 35 contests compiled into 6 ballot styles. Each ballot style contains 15 contests. The voting variations supported in a primary election by the Commonwealth of Pennsylvania are defined in this election. The voting variations are as follows:

- Partisan contest
- Non-Partisan
- Primary Presidential delegation nominations
- Write-In voting
- N of M Contest
- Cross-Party Filed Candidates

This closed primary election was designed to functionally test the handling of multiple ballot styles across geographical subdivisions, support for two languages, and support for common primary specific voting variations.

**Configuration:**

**EMS computer loaded with software certified for use in Pennsylvania to create the following configuration:**

**Name:** Pennsylvania Certification Closed Primary Election

**Voting Devices:** 1 machine for each precinct

**Precincts:** Precinct 1, Precinct 2, Precinct 3

**Parties:** Republican, Democrat

**Languages:** English, Spanish

**Totals Contests:** 35

**Election Definition: Pennsylvania Certification General Election**

**General Election Description:**

A general election combining presidential year contests, non-presidential year contests, and municipal contests into a single election held in 3 precincts one of which is a split precinct on the “Representative in the General Assembly” contests. This election contains 21 contests compiled into 4 ballot styles (excluding language styles). 15 of the contests are in all ballot styles. The other 6 are split between at least 2 of the precincts with a maximum of 21 different contests spread across the 3 precincts. All voting variations supported by the Commonwealth of Pennsylvania are defined in this election. The voting variations are as follows:

- Partisan contest
- Non-Partisan contest
- N of M contest
- Referendum contest
- Retention Contest
- Straight Party voting
- Write-In voting
- Split Precinct
- Cross-Party Nominated

This general election was designed to functionally test the handling of multiple ballot styles across geographical subdivisions, support for English and Spanish languages, support for all Pennsylvania voting variations, and audio support for English and Spanish.

**Configuration:**

**EMS computer loaded with software certified for use in Pennsylvania to create the following configuration:**

**Name:** Pennsylvania Certification General Election

**Voting Devices:** 1 machine for each precinct

**Precincts:** Precinct 1, Precinct 2 split into 2a and 2b, Precinct 3

**Parties:** Republican, Democratic, Green, Libertarian

**Languages:** English, Spanish

**Totals Contests:** 21

**TEST CASES**

**TEST CASES**

**AutoMARK Ballot Marking Device**

<b>Test Case Identifier:</b> 01 – 25 P.S. § 3031.7(1) Voter Secrecy (ADA Voter)	
<b>PA ST 25 P.S. § 3031.7 Requirement:</b>	<i>(1) Provides for voting in absolute secrecy and prevents any person from seeing or knowing for whom any voter, except one who has received or is receiving assistance as prescribed by law, has voted or is voting.</i>
<b>Test Objective:</b> To determine if a voter's selections input using an ADA device can be observed during the act of voting, or once a vote has been cast.	<b>Test Configuration:</b> Ballot Marking Device (BMD) and precinct tabulation device are configured as described for normal election day operation by Pennsylvania procedures and/or the device manufacturer for an ADA voter. A marker is placed 12 feet (measured from the lowest point of the devices voting surface to the floor) directly behind the center of the BMD and the precinct tabulation device. From that marker, another marker is placed 12 feet to the right side and the left side. The side distance observation points should be approximately 17 feet. See Step 1000 for a layout diagram. The ADA voter will be positioned in the center of the BMD and the precinct tabulation device with a site line of 4 feet. See Step 1001.
<b>Test Equipment:</b>	Standard 15+ foot tape measure
<b>Special Procedural Requirements:</b>	Two roles are required for this test case: an ADA Voter role and an Observer role. The ADA voter will be positioned with a line of site at 48 inches. The observation must be made by an individual between the heights of 68 inches and 71 inches.
<b>Assumptions:</b>	An election is loaded on the devices and the polls are open, ready for voting.

<b>Test Case Identifier:</b> 10 – 25 P.S. § 3031.7(10) Ballot Review and Change	
<b>PA ST 25 P.S. § 3031.7 Requirements:</b>	(10) If it is of a type that registers the vote electronically, the voting system shall permit each voter to change his vote for any candidate or upon any question appearing on the official ballot up to the time that he takes the final step to register his vote and to have his vote computed. If it is of a type that uses paper ballots or ballot cards to register the vote and automatic tabulating equipment to compute such votes, the system shall provide that a voter who spoils his ballot may obtain another ballot; any ballot thus returned shall be immediately cancelled and at the close of the polls shall be enclosed in an envelope marked "Spoiled" which shall be sealed and returned to the county board.
<b>Test Objective:</b> To determine if the voting device allows the voter to review the selections and change a vote selection before cast of the ballot.	<b>Test Configuration:</b> Precinct tabulation device configured as described for normal election day operation by Pennsylvania procedures and/or the device manufacturer.
<b>Test Equipment:</b>	None
<b>Special Procedural Requirements:</b>	None
<b>Assumptions:</b>	An election is loaded on the device and the polls are open, ready for voting.
<b>Step</b>	<b>Description</b>
<b>1000</b>	Obtain a ballot for voting  <i>Expected:</i> The ballot is blank and vote selections can be made.  <i>Actual:</i>
<b>1010</b>	Vote for the first candidate in the first all "1 of 1" contest excluding a straight party contest, the first "N" candidates in all "N of M" contests, and select the "Yes" option in all "Question" contests. The ballot must be marked in such a way as to meet the manufacturer's given criteria for a mark (for example, the oval must be completely filled in with an appropriate marking utensil).  <i>Expected:</i> The ballot indicates selections as described above.  <i>Actual:</i>
<b>1020</b>	Cast the ballot on the optical scan precinct tabulation device.  <i>Expected:</i> The ballot is cast successfully.  <i>Actual:</i>
<b>1030</b>	Obtain a ballot for voting  <i>Expected:</i> The ballot is blank and vote selections can be made.  <i>Actual:</i>

<b>1040</b>	<p>Vote for the first candidate in the first all “1 of 1” contest excluding a straight party contest, the first “N” candidates in all “N of M” contests, and select the “Yes” option in all “Question” contests. <b>Criteria for Evaluation of the Test Results:</b> The intended selections input above are recorded, stored, and reported as input by the tester. The attempts to select more persons than the vote for and any question more than once are unsuccessful.	

<b>Test Case Identifier:</b> 17 – 25 P.S. § 3031.7(17) Public Counter, No Reopening of Polls, Media Security with Tamper Proof Locks and Zero Proof and Tally Reports.	
<b>PA ST 25 P.S. § 3031.7 Requirements:</b>	<p>(17) <i>If the voting system is of a type which provides for the computation and tabulation of all votes at a central counting center or if it provides for the tabulation of district totals at such a central counting center, the central automatic tabulating equipment shall include the following mechanisms or capabilities:</i></p> <p>(i) <i>It shall be constructed so that every person is precluded from tampering with the tabulating element during the course of its operation.</i></p> <p>(ii) <i>If the number of choices for any office or on any question exceeds the number for which the voter is entitled to vote, it shall reject all choices recorded on the ballot for that office or question.</i></p> <p>(iii) <i>It shall have a means by which to verify that the counters for each candidate position and for each question are all set to zero and shall be able to generate a printed record of each election district showing the total number of voters whose ballots have been tabulated, the total number of votes cast for each candidate whose name appears on the ballot, and the total number of votes cast for, or against, any question appearing on the ballot. It may also be capable of generating cumulative election reports.</i></p>
<b>Test Objective:</b> To determine if the voting device has a public counter, does not allow the reopening of the polls, and supplies a zero proof and tally report.	<b>Test Configuration:</b> Optical Scan Precinct tabulation device configured as described for normal election day operation by Pennsylvania procedures and/or the device manufacturer. This includes all security locks and seals.
<b>Test Equipment:</b>	None
<b>Special Procedural Requirements:</b>	None
<b>Assumptions:</b>	The election media is installed but the polls have not been opened.
<b>Step</b>	<b>Description</b>
<b>1000</b>	<p>Ensure media is loaded but the polls have not been opened. Use the designated method to open polls. If a response is needed to print “Zero Proof” report, select this option.</p> <p><i>Expected:</i> The optical scan precinct tabulation device opens the polls and prints a “Zero Proof” report.</p> <p><i>Actual:</i></p>
<b>1010</b>	<p>Obtain a blank ballot.</p> <p><i>Expected:</i> The ballot is blank and vote selections can be made.</p> <p><i>Actual:</i></p>
<b>1020</b>	<p>On the straight party contest, mark the first selection in the straight party contest.</p> <p><i>Expected:</i> The ballot indicates a vote selection for the first selection in the straight party contest.</p> <p><i>Actual:</i></p>
<b>1030</b>	<p>Proceed to the optical scan precinct tabulation device. Observe the public counter value being 0.</p>

	<p><i>Expected:</i> The optical scan precinct tabulation device's public counter is visible and the value is 0.</p> <p><i>Actual:</i></p>
<b>1040</b>	<p>Cast the ballot. Observe the acknowledgement of "successful" ballot cast, if provided. Observe the public counter incrementing by one.</p> <p><i>Expected:</i> The optical scan precinct tabulation device successfully cast the ballot and the public counter is incremented. If the ballot was not cast successfully the test is halted.</p> <p><i>Actual:</i></p>
<b>1050</b>	<p>Close the polls and print the closed polls report tape.</p> <p><i>Expected:</i> The polls closed and a report is printed.</p> <p><i>Actual:</i></p>
<b>1060</b>	<p>Use the designated method to attempt to reopen the polls.</p> <p><i>Expected:</i> The polls cannot be reopened.</p> <p><i>Actual:</i></p>
<b>1070</b>	<p>Place lock on the optical scan precinct tabulation device per Pennsylvania Procedures to ensure all operation of the tabulation element is prevented.</p> <p><i>Expected:</i> The optical scan precinct tabulation device can be secured so that all operation of the tabulation element is prevented.</p> <p><i>Actual:</i></p>
<b>1070</b>	<p>Review the closed polls report to ensure all selections input above are recorded and reported correctly.</p> <p><i>Expected:</i> The closed polls report presents the accumulated totals for the selections input above.</p> <p><i>Actual:</i></p>
<p><b>Criteria for Evaluation of the Test Results:</b> The intended selections input above are recorded, stored, and reported as input by the tester. The voting device is able to produce a "Zero Proof" and "Tally Report". The voting device has a visible public counter and the counter increments correctly.</p>	

**Test Case Identifier:** Central Count Processing

**Test Objective:**

This test is designed to ensure a central count scanner to properly process a larger amount of ballots. The central counter scanner must have multi-feed protection, out stacking ability for ballots it is unable to process, and the ability to segregate ballots that require human intervention.

**Test Configuration:**

Central Scan tabulation device configured as described for normal election day operation by Pennsylvania procedures and/or the device manufacturer.

**Test Method:**

An election definition will need to be created using the following requirements:

- 8 ½” X 14” ballot lengths
- 6 geographical subdivisions
- 1 split precinct
- 10 to 20 contests
- 10 candidates in 1 contests
- 1 “N of M” contest
- Actual names for candidates
- Support to outstack write-ins
- Support for Federal, State, and Local level offices

The test deck for this test will be created using the following formula:

- Number of ballots provided per precinct equal to  $\sum_1^n x$  (where  $n$  is the number of options in the largest number contest on the ballot), plus two (to be left blank), plus one (to be overvoted) – this is applied per political party in a primary.
- Ballots marked such that the vote distribution in each contest is ascending order. For example, in a contest with 5 candidates and a write-in:
  - Position 1: 6 votes
  - Position 2: 5 votes
  - Position 3: 4 votes
  - Position 4: 3 votes
  - Position 5: 2 votes
  - Position 6 (write-in): 1 vote
- There should be two ballots in each precinct which are blank.
- There should be one overvoted ballot per precinct.

The test deck should be run a be determined amount of times sufficient to determine the proper processing of the test deck. The actual number of times the test deck is to be run will be documented in the Test Protocol.

**Criteria for Evaluation of the Test Results:** All ballots are processed, recorded, stored, and reported as documented in the described test deck.
